

Q-Val

SQS Q-Val

Q-Val includes a wide range of pre-defined requirements, not specific for a specific project (known as “Good Practices”). “Customers Requirements” (specific requirements for the project) can also be added as necessary.

The Q-Val methodology has been designed so that it can easily be adapted to any type of web application thanks to its double Requirements/Facets structure.

The different types of web applications may be classified:

According to their functions:

- › Information website
- › Search engine
- › Forum
- › Download area
- › E-commerce
- › E-Business
- › Issuing certificates

According to the users:

- › Internal use website
- › Specialised audience
- › General public
- › People with disabilities

According to the application that is going to be analysed:

According to the application that is going to be analysed, the facets to be taken into account will vary. These facets are grouped into the following categories:

- › Usability and Accessibility
- › Security
- › Functionality
- › Performance
- › Architecture and design
- › HTML standards
- › Others
